

## SPARE PARTS SOLUTIONS

At UpWind Solutions, we strive to make every wind project a success. We partner with wind project developers and owners, aligning our goals with theirs, to maximize customer return on investment and ensure success over the full project life span.

Our spare parts solutions business is a critical component of delivering mutual success. Our expertise ensures parts availability and faster response times so we can provide a higher standard of service while also maintaining a lower cost per kilowatt hour. We achieve this by providing:

- **Parts Expertise**

We offer our customers knowledge and expertise on spare parts that enables them to optimize their inventory needs, supplement in-house storage with UpWind's inventory management service, find solutions to obsolescence problems and source quality parts for delivery at the right time for the most competitive cost.

- **Higher Yields**

The combination of parts availability and rapid response times allows us to drive higher energy yields.

- **Competitive Costs**

UpWind Solutions allows our partners to save costs on parts by:

- Providing higher value at competitive unit prices
- Outsourcing inventory management
- Reducing labor mobilization/demobilization costs incurred with downtime when parts are not available

- **Reduced Lead Times**

With a strategically placed distribution center, we are able to reach our customers in a timely manner. This minimizes the impact of production downtime that results when our customers are waiting on parts.
