

OPERATIONS AND MAINTENANCE SERVICES

UpWind Solutions provides full-service operations and maintenance for utility-scale wind projects. We partner with wind project developers and owners, aligning our goals with theirs to maximize profits and ensure success over the full project life span.

We are committed to hiring the very best technicians in the industry and invest in their continuous, comprehensive and state-of-the-art training to ensure that safety is our number one priority. This relentless commitment to quality is the key to our success. UpWind Solutions delivers the highest possible energy yield with over 99% wind turbine availability.

- **A Higher Standard of Service**

Not only does UpWind Solutions have a higher standard for O&M service, but we deliver high quality results on time, every time and that improves asset performance and lowers the cost per KWh.

- **Operations**

UpWind Solutions' team of highly trained and experienced technicians and managers, along with our performance monitoring center, provide oversight of day-to-day operations that maximize production and project revenues.

- **Maintenance**

Our on-site O&M team provides both scheduled and unscheduled maintenance services for wind energy projects. Our team has deep industry experience, so we can develop maintenance schedules that optimize production and equipment availability. We want your turbines up and running so you can maximize the opportunity created by high winds.

- **Retrofits and Upgrades**

We constantly strive to identify opportunities to upgrade turbines to improve power output, update to the latest technology or increase reliability and extend component lifecycle. Our team has the training and experience that makes us the premier provider of retrofits and upgrades.

- **Specialized Services**

Our specialized services include blade services, major maintenance solutions, turbine gearbox inspections, and BOP services.
